An example F#/noweb literate program

Phil Yeeles

January 23, 2024

Foo bar baz quux.

1a   ⟨*Forth* 1a⟩≡

```
module Forth
```

This is an example F# program.

1b   ⟨*Program* 1b⟩≡   (1c)

```
open System

[<EntryPoint>]
let main args =
    printfn "Nice command-line arguments! Here's what System.Text.Json has to \
            say about them:"

    let value, json = 2,"foo"
    printfn $"Input: %0A{value}"
    printfn $"Output: %s{json}"

    0 // return an integer exit code
```

1c   ⟨*Program.fs* 1c⟩≡
       ⟨*Program* 1b⟩
       ⟨*Program* 1b⟩
